

Mississippi (North America)

Native Americans have lived along the Mississippi River. In the 18th century, the river was the primary western boundary of the young United States. The Mississippi River is also known as the Middle Mississippi.

Ganges (Himalayan and Bay of Bengal)

The Ganges is a lifeline to millions who live along its course. It is a sacred river and worshiped as the goddess Ganga in Hinduism. Many small streams comprise the headwaters of the Ganges.

Rivers Location

Amazon (South America)

The Amazon was initially known by Europeans as the Marañon. There is ample evidence that the areas surrounding the Amazon River were home to complex and large-scale societies.

Danube (Eastern and Central Europe)

The Danube river is home to fish species such as pike, zander, huchen, Wels, catfish, burbot and tench. The land drained by the Danube extends into many other countries. The Danube is navigable by the ocean ships from the Black Sea to Braila in Romania (the maritime river sector).

Huang He (Asia)

Huang He, otherwise known as the Yellow River is one of several rivers that are essential for China's existence. The middle stream of the Yellow River passes through the Loess Plateau, where substantial erosion takes place.
