

Strange Space Being Gets Nearer to Earth!!

- ❑ The Astronomers think we have a Space Dragon flying towards the Earth! It could be a bat, it could be a black angel, we don't know!! All we know is it is getting nearer and nearer to Earth. Out of a star it came and is now flapping down to us, if it lands at this speed our world will be completely destroyed like an express train crashing into a gold fish bowl, NOT GOOD! It just popped out of a bright red star one autumn night!
- ❑ One of our astronomers can give us more information of what he saw, this is Peter King who we will be interviewing for more information. 'So Peter, when did you first notice this strange black thing wriggling out of the star?'
- ❑ 'I could hardly actually see properly I was that frightened but what I did notice is that it was freakily hairy and I think it could have wings, hard to miss those wings. It could be a flying lizard or a gigantic bat but it looks closest to a dragon!'
- ❑ 'Oh, no! Do you think it will land any time soon?'
- ❑ 'Not really, when I don't use my telescope it looks like a tiny black dot.'
- ❑ So, we don't think it will land ,soon but we think it may be a dragon that could be heading for the Earth...
